OSD Black Launches the TreVoce Series of Stand-alone Powered Subwoofers for High End Home Theaters and Listening Rooms

The space-saving powered subwoofers heighten the sound experience with triple configuration woofers and up to 800 Watts of power.

[BREA, CA - June 26, 2020] OSD Black, an Audio Gear Group brand, introduces two high-impact powered stand-alone subwoofers, OSD Black TreVoce 12 and OSD Black TreVoce 10, both dynamic powered subwoofers that supply 800 Watts (TreVoce 12) and 500 Watts (TreVoce 10) of power to dramatically enhance bass in home theaters, media rooms, and high-end listening spaces.

Ideal for custom integration projects where bass is needed but space is limited, these robust stand-alone subwoofers have a unique configuration that includes an active woofer and two symmetrically-built passive woofers. The active subwoofer is self-contained and uses the sub's amplifier to reproduce sound, while the two passive subwoofers enhance the SPL for an all-encompassing bass experience that defies the small footprint.

"We designed these powered subwoofers for custom integrators who want to give customers the incredible sound experience of a high-performance subwoofer but are restricted by room size or layout," notes Bryan Strachota, AGG's National Brand Manager. "The triple subwoofer combination allows our TreVoce Series to crank out huge bass sound in an easy to place or hide enclosure."

The TreVoce 12 includes a 12" active woofer and two 12" passive subwoofers. Offering up 800 Watts of power, the TreVoce 12 incorporates advanced digital amplifier technology that maximizes performance but, unlike other powered subs, generates very little heat and consumes less than 0.5 Watts in standby.

The TreVoce 10 includes the same features with a 10" active woofer and two 10" passive subwoofers. Both the TreVoce 12 and TreVoce 10 include 24K gold-plated inputs for the highest quality sound transfer and an elegant synthetic leather finish that blends easily into any décor.

The TreVoce Series is available to custom integrators only and includes the following features:

- 800W (TreVoce 12) or 500W (TreVoce 10) of power handling
- Triple-symmetric design maximizes SPL in a small footprint
- Sealed enclosure ensures fast response and accurate bass sound
- Advanced digital amplifier technology for efficiency and power delivery
- Multiple controls to dial in the right amount of bass balance
- 24K Gold-plated inputs for the highest quality sound transfer
- Speaker and line level inputs to ensure optimal integration with main speakers
- Elegant synthetic leather finish complements any décor
